

PDF Layout Note

Left column

Phase 0 PDF sample. The extractor should detect that this PDF has a native text layer before considering OCR. Body text is arranged in a left column and a right column so the future extractor must preserve reading order by using coordinates.

Right column

The caption below is not part of the main paragraph. It should be stored as `caption_text`. Header and footer strings are useful for testing whether layout cleanup can ignore repeated noise.

[diagram placeholder]

Figure 1: Expected extraction flow from native PDF text to structured text fields.
